**Essay Questions**

85. What is a liquid asset and why is it necessary for a firm to maintain a reasonable level of liquid assets?

86. Why is interest expense excluded from the operating cash flow calculation?

87. Explain why the income statement is not a good representation of cash flow.
88. Discuss the difference between book values and market values on the balance sheet and explain which is more important to the financial manager and why.
89. Note that in all of our cash flow computations to determine cash flow of the firm, we never include the addition to retained earnings. Why not? Is this an oversight?
90. Note that we added depreciation back to operating cash flow and to additions to fixed assets. Why add it back twice? Isn't this double-counting?

91. Sometimes when businesses are critically delinquent on their tax liabilities, the tax authority comes in and literally seizes the business by chasing all of the employees out of the building and changing the locks. What does this tell you about the importance of taxes relative to our discussion of cash flow? Why might a business owner want to avoid such an occurrence?

92. Interpret, in words, what cash flow of the firm represents by discussing operating cash flow, changes in net working capital, and additions to fixed assets.

50,001 - 75,000	25%
75,001 - 100,000	34%
100,001 - 335,000	39%

- A. 21.38%
- B. 23.88%
- C. 25.76%**
- D. 34.64%
- E. 39.00%

Tax = .15(\$50,000) + .25(\$25,000) + .34(\$25,000) + .39(\$126,500 - \$100,000) = \$32,585;

#### Essay Questions

85. What is a liquid asset and why is it necessary for a firm to maintain a reasonable level of liquid assets?

*Liquid assets are those that can be sold quickly with little or no loss in value. A firm that has sufficient liquidity will be less likely to experience financial distress.*

*Topic: LIQUID ASSETS*  
*Type: ESSAYS*

86. Why is interest expense excluded from the operating cash flow calculation?

*Operating cash flow is designed to represent the cash flow a firm generates from its day-to-day operating activities. Interest expense arises from a financing decision and thus should be considered as a cash flow to creditors.*

*Topic: OPERATING CASH FLOW*  
*Type: ESSAYS*

87. Explain why the income statement is not a good representation of cash flow.

*Most income statements contain some noncash items, so these must be accounted for when calculating cash flows. More importantly, however, since GAAP is used to create income statements, revenues and expenses are booked when they accrue, not when their corresponding cash flows occur.*

Topic: CASH FLOW AND ACCOUNTING STATEMENTS  
Type: ESSAYS

88. Discuss the difference between book values and market values on the balance sheet and explain which is more important to the financial manager and why.

*The accounts on the balance sheet are generally carried at historical cost, not market values. Although the book value of current assets and current liabilities may closely approximate market values, the same cannot be said for the rest of the balance sheet accounts. Ultimately, the financial manager should focus on the firm's stock price, which is a market value measure. Hence, market values are more meaningful than book values.*

Topic: BOOK VALUE AND MARKET VALUE  
Type: ESSAYS

89. Note that in all of our cash flow computations to determine cash flow of the firm, we never include the addition to retained earnings. Why not? Is this an oversight?

*The addition to retained earnings is not a cash flow. It is simply an accounting entry that reconciles the balance sheet. Any additions to retained earnings will show up as cash flow changes in other balance sheet accounts.*

Topic: ADDITION TO RETAINED EARNINGS  
Type: ESSAYS

90. Note that we added depreciation back to operating cash flow and to additions to fixed assets. Why add it back twice? Isn't this double-counting?

*In both cases, depreciation is added back because it was previously subtracted when obtaining ending balances of net income and fixed assets. Also, since depreciation is a noncash expense, we need to add it back in both instances, so there is no double counting.*

Topic: DEPRECIATION AND CASH FLOW  
Type: ESSAYS

91. Sometimes when businesses are critically delinquent on their tax liabilities, the tax authority comes in and literally seizes the business by chasing all of the employees out of the building and changing the locks. What does this tell you about the importance of taxes relative to our discussion of cash flow? Why might a business owner want to avoid such an occurrence?

*Taxes must be paid in cash, and in this case, they are one of the most important components of cash flow. The reputation of a business can undergo irreparable harm if word gets out that the tax authorities have confiscated the business, even if only for a couple of hours until the business owner can come up with the money to clear up the tax problem. The bottom line is if the owner can't come up with the cash, the tax authority has effectively put them out of business.*

Topic: TAX LIABILITIES AND CASH FLOW  
Type: ESSAYS

92. Interpret, in words, what cash flow of the firm represents by discussing operating cash flow, changes in net working capital, and additions to fixed assets.

*Operating cash flow is the cash flow a firm generates from its day-to-day operations. In other words, it is the cash inflow generated as a result of putting the firm's assets to work. Changes in net working capital and fixed assets represent investments a firm makes in these assets. That is, a firm typically takes some of the cash flow it generates from using assets and reinvests it in new assets. Cash flow of the firm, then, is the cash flow a firm generates by employing its assets, net of any acquisitions.*
